TACKLE YOUR WEEDS EARLY TO GIVE YOUR CROP A RUNNING START!

BLITZ® herbicide for preseed burn down; summer fallow or post-harvest when mixed with glyphosate for control of emerged, actively growing weeds. **BLITZ** is a Group 2 herbicide that binds to the acetolactate synthase enzyme (ALS) and prevents the formation of amino acids which are essential for plant growth and weed survival.

Product Benefits:

- **BLITZ** herbicide inhibits the production of the ALS enzyme in plants. This enzyme is essential for the production of certain amino acids which are essential for plant growth.
- Group 2 mode of action herbicide
- **BLITZ** herbicide + glyphosate may be applied in the spring prior to seeding and no longer than 48 hours after seeding prior to any crop emergence
