Growers who use copper know the benefits of preventing fungi and bacteria from attacking their crops. Fruit, vegetable crops as well as ornamentals are labeled for use. Copper provides a wide control spectrum with strong protective contact and residual action. These Group M products are registered for specific crop/diseases, different crop stages for disease control and crop safety.

Product Benefits:

- **COPPER 53W** is a wettable powder fungicide used in fruit and vegetable crops for control of a range of foliar diseases
- An inorganic compound used as a preventative fungicide with no known resistance
