A combination of active ingredients and wetting agents to be used for the control of sucker growth on flue-cured, burley and cigar tobacco. The creamy emulsion formed by diluting the concentrated product with water is applied to the tobacco plant as a coarse spray. To obtain an effective sucker kill, the emulsion must come in direct contact with the suckers.

Product Benefits:

- Tobacco sucker control
- Fatty alcohols (present as n-decanol) 688 g/L
