

RADIATE® contains two different plant growth hormones (PGHs) – IBA and Cytokinin (kinetin) – that synergistically stimulate and improve root development. RADIATE can be used as a foliar application during the 3- to 6-leaf growth period to jumpstart early season root growth and plant vigour, which can lead to gains in crop productivity.

Product Benefits:

- Promotes root and shoot growth
- Improves early season plant vigour
- Reduces early season stress
- Improves overall plant health
