

BLACKMAX WSG

www.lovelandproducts.ca

BLACKMAX® WSG is an extracted carbon granule that can easily be blended into any dry fertilizer program. This innovative product-based C² Technology, Loveland Products' proprietary carbon extraction and reaction process, increases nutrient uptake, reduces plant stress, and sets the stage for improved soil health.

Product Benefits:

- Fully soluble granule allows for near-immediate activity
- Unlocks non-labile soil nutrients, improves nutrient solubility and improves water holding capacity
- Promotes beneficial microbes involved in nutrient cycling to make soil nutrients more available to the crop
